DETAILED ACTION

Location of Application

1. The location of the subject application has changed. The subject application is now located in Group 1630, Art Unit 1637, and is assigned to Patent Examiner Jeffrey Siew.

Election/Restrictions

2. Claims 1-6 & 22 are withdrawn from further consideration pursuant to 37 CFR 1.142(b) as being drawn to a nonelected invention, there being no allowable generic or linking claim. Election was made **with** traverse in Paper No. 12. The responses argument is found convincing and fully responsive to the first restriction.

Claim Rejections - 35 USC § 103

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various

Art Unit: 1637

claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

Claims 7-21 are rejected under 35 U.S.C. 103(a) as being unpatentable over Lucito et al (PNAS vol. 95 pp. 4487-4492 1998) in view of Thorstenson et al (Genome Research vo. 8 No. 8 pp. 848-855 1998).

Lucito et al teach the formation of libraries by fragmenting DNA and using PCR to amplify the mixture (see whole doc. esp. abstract). They use T4 DNA polymerase.

Lucito do not teach sheering.

Thorstenson teach shearing where 90% of sheared DNA fragments fall within a two fold size distribution. (see whole doc. esp. abstract).

One of ordinary skill in the art would have been motivated to apply Thorstenson et al's shearing to Lucito et al's library construction method in order to increase the fragmentation of genomic DNA. Thorstenson states that shearing allows for more random fragmentation which would be useful in shot gun sequencing. It would have been prima facie obvious to apply Thorstenson's shearing approach to Lucito et al's library construction to provide a more random and thorough fragmentation.

SUMMARY

4. No claims allowed.

CONCLUSION

5. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Jeffrey Siew whose telephone number is (703) 305-3886 and whose e-mail address is Jeffrey.Siew@uspto.gov.
